Backend Reference

Jinja2 syntax	Purpose
`{{ title }}`	Insert the value of `title`.
`{{ event['day'] }}`	Look up and insert a field.
`{% for event in events %}...{% endfor %}`	Repeat HTML for each item.
`{% if logged_in %}...{% else %}...{% endif %}`	Choose HTML based on a condition.
`{% extends 'base.html' %}`	Use another template's layout.
`{% block content %}...{% endblock %}`	Define or fill a named part of the layout.

Requests and responses

Data or operation	FastAPI/Python expression	Meaning
Query parameter	`request.query_params.get('day')`	Read a value from the URL.
Form field	`username: str = Form('')`	Read the submitted field, defaulting to `''`.
Cookie	`request.cookies.get('session')`	Read a cookie, or `None` if absent.
Set a cookie	`response.set_cookie('session', token)`	Ask the browser to save a value.
Delete a cookie	`response.delete_cookie('session')`	Ask the browser to remove it.
Redirect after a POST	`RedirectResponse('/', status_code=303)`	Ask the browser to make a GET request for `/`.
